*Serious drought
Help save water!*

October 28, 2016

Ms. Diane Boyer-Vine
Legislative Counsel
State Capitol, Room 3021
Sacramento, CA 95814

Mr. Daniel Alvarez
Secretary of the Senate
State Capitol, Room 3044
Sacramento, CA 95814

Mr. E. Dotson Wilson
Chief Clerk of the Assembly
State Capitol, Room 3196
Sacramento, CA 95814

Dear Ms. Boyer-Vine, Messers. Alvarez and Wilson:

I am pleased to transmit the California Department of Transportation's (Caltrans) report entitled "2015 Fish Passage Annual Report to the California State Legislature" prepared pursuant to California Streets and Highway Code section 156, (Senate Bill 857, Kuehl Chapter 589, Statutes of 2005).

This report shows seven completed projects for last year, and outlines major ongoing efforts. Caltrans continues to partner with resource agencies to prioritize barriers, to find efficiencies in the design and permitting process, and to fund and deliver these projects.

Distribution of this report to the Legislature has been made by Caltrans pursuant to California Government Code section 9795. This report can be found at <http://www.dot.ca.gov/reports-legislature.htm>.

Sincerely,

A handwritten signature in blue ink, appearing to read "Malcolm Dougherty".

MALCOLM DOUGHERTY
Director

Enclosure

2015 FISH PASSAGE ANNUAL REPORT

*Little Grass Valley Creek (District 2, Redding), Fish Passage Retrofit Project

Report to the Legislature

Prepared:
October 2016

Prepared by the California Department of
Transportation, Division of Environmental Analysis

Executive Summary

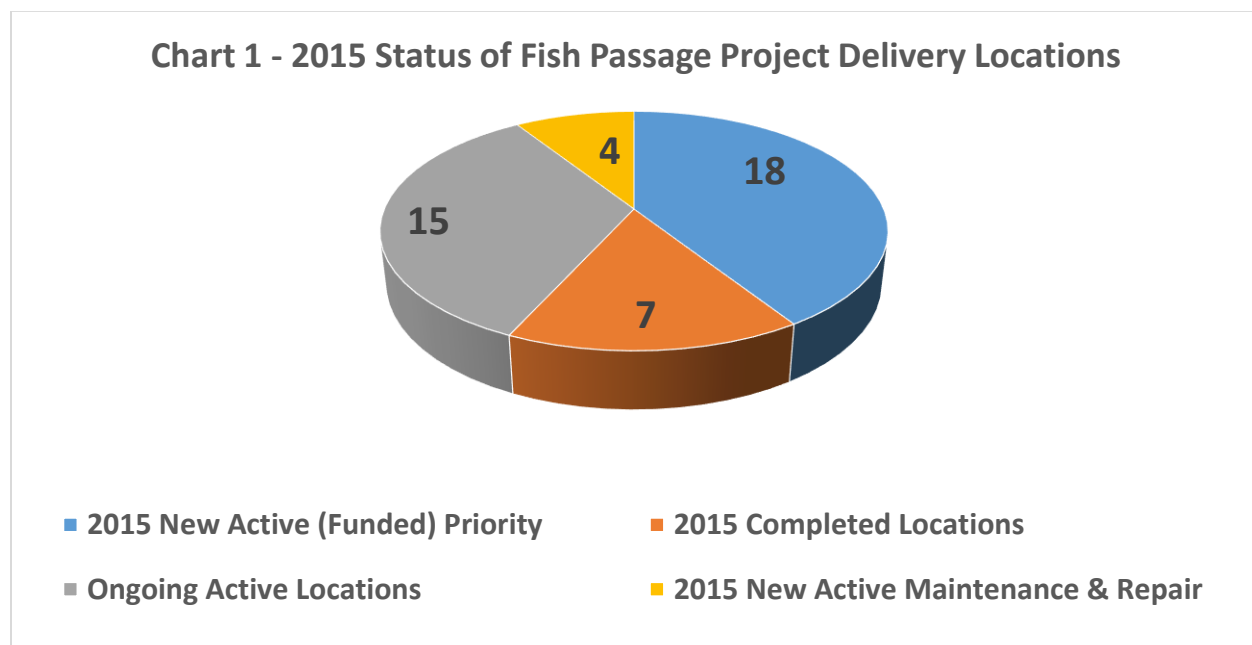

2015 Fish Passage Program Accomplishments

- Completed Fish Passage Remediation Locations = **7 Locations**
- Completed Fish Passage Assessment Locations = **455 assessments**
- Active Fish Passage Remediation Locations (programmed) = **37 locations**
- Priority Fish Passage Barrier Locations (future program) = **50 locations**

New Project Initiation

In 2015 twenty-two new fish barrier locations were funded for project delivery, on the State Highway System; eighteen of those locations are high priority locations for both Caltrans and the California Department of Fish and Wildlife (CDFW), and four of the locations are lower priority barriers that have been funded due to identified maintenance repair needs or as designated project mitigation.

The chart below (Chart 1) demonstrates the distribution of current Project Delivery locations.

Internal Partnering

Toward the goal of identifying internal opportunities to fund and deliver an increased number of fish passage remediation locations, internal experts from Districts and Headquarters Divisions met in November 2015 to identify partnering efforts and process efficiencies. Staff and managers from throughout the state and each division identified roles, responsibilities, increased communication, internal and external partnering, as well as process improvements. Caltrans staff and managers from Environmental, Project Management, Maintenance,

Hydraulics, Planning and Right of Way continue to meet to address the status of fish passage locations, priorities and overall progress.

The Caltrans Division of Engineering Services (DES) and Division of Environmental Analysis have partnered to consider efficiencies and assistance towards standardized design solutions for small bridge locations and have renewed a commitment towards innovative solutions such as Accelerated Bridge Construction (ABC), which consists of pre-cast bridge elements built off-site and assembled at the site, thus reducing construction duration and associated on-site, environmental impacts.

External Partnering

In February 2016, Caltrans invited agency partners to a Fish Passage Summit Meeting that was held in Sacramento, California. State and Federal agencies met to discuss the status of fish barrier locations on the State Highway System. Caltrans staff from Environmental, Project Management, Structures, Design, and Planning attended the meeting to hear feedback from expert fish passage agency staff and managers. Internal and external partnerships and communication continue to improve between Caltrans and fish passage external partners. Efficiencies such as standardized designs for small bridge solutions are in progress.

In May of 2016, the California Department of Fish and Wildlife was able to fill the Caltrans funded Fish Passage Engineering Position. The National Marine Fisheries Service (NMFS), is actively working towards filling the position that was funded at NMFS.

AB 95 – Funding

After Oct 31, 2016, AB 95 (SEC. 8. Section 156.1 of the Streets and Highways Code), requires Caltrans to provide funding information respective of the appropriated \$5,000,000. The October 31, 2017 Fish Passage Annual Report and annual reports thereafter will include respective funding information.

Background

This report provides fish passage assessment and remediation information for locations which Caltrans is responsible. This is in accordance with Streets and Highways Code, Section 156.1. This report updates progress and describes assessment and remediation activities between January 1 and December 31, 2015.

In the decade since legislation was passed, by far this report demonstrates the greatest improvements in both internal and external execution. All four of the current reporting requirements; Completed Remediations, New Assessments, Active Projects (funded) and Priority Locations have all demonstrated improvements.

Caltrans and our partners continue to develop additional Design, Environmental and Maintenance expertise, support and guidance to improve fish passage remediation efforts.

Overview of Fish Passage Progress on the State Highway System (from 2006 to 2015)						
District	Existing Barrier Locations	Locations Remediated (Since 2006)	2015 Locations Remediated	Active Locations¹		2015 Priority Locations²
				2015	Ongoing	
District 1 (Eureka)	286	15	5	11	5	10
District 2 (Redding)	47	10	2	5	0	10
District 3 (Marysville)	0 ³	0	0	0	0	0
District 4 (Oakland)	70	1	0	2	3	10
District 5 (San Luis Obispo)	84	8	0	0	7	10
District 6 (Fresno)	0	0	0	0	0	0
District 7 (Los Angeles)	21	1	0	1	0	10
District 10 (Stockton)	0	0	0	0	0	0
District 11 (San Diego)	2	0	0	2	0	0
District 12 (Orange)	1	0	0	1	0	0
Totals	519	37	7	37		50

¹ Active locations are partially or fully funded. The 2015 locations are new to the report.

² Priority Locations have the highest biological value, per Caltrans and CDFW, and are not yet funded.

³ Districts 3, 6 and 10 have no identified barriers or priorities. Passage Assessments are ongoing in Districts 3 & 10 and will be included in the next report to the Legislature.

2015 Completed Fish Passage Remediation Locations

Seven fish passage locations were completed in 2015. Table 1, 2015 Completed Fish Passage Remediations, contains information on the locations. Figure 2 (page 7) is a map of the locations listed in Table 1.

Table 1 – 2015 Completed Fish Passage Remediation Locations							
Map #	Caltrans District	County	Route	Post Mile	PAD ID #	Stream Name	Project Name
1	1	Del Norte	197	5.0	707143	Sultan Creek	Sultan Creek Bridge
2	1	Mendocino	128 ⁴	21.8	707199	Clow Creek	Culvert upgrade
3	1	Mendocino	128	27.54	707205	Graveyard Creek	Culvert upgrade
4	1	Mendocino	128	36.63	707208	Lost Creek	Culvert upgrade
5	1	Mendocino	128	39.88	707210	Beebe Creek	Culvert upgrade
6	2	Trinity	299	68.0	735688	Little Grass Valley Creek	Little Grass Valley Creek Fish Passage
7	2	Trinity	299	68.2	720511	Little Grass Valley Creek	Little Grass Valley Creek Fish Passage

⁴ The retrofit improvement locations that were addressed on Mendocino 128 creeks (Clow, Graveyard, Lost and Beebe) are in steep mountain streams and have already experienced sediment and scour issues that will be monitored during the 2016/2017 winter. It is likely that a maintenance project will be initiated to address the excavation of sediment, rock weir repair and any other identified improvements for fish passage.

Figure 1 - 2015 Completed Fish Passage Remediation Locations

2015 Completed Fish Passage Assessment Locations

In 2015, 455 fish passage assessments were completed of which Table 2 shows the below 30 locations, designated as: new barriers, barriers due to existing sediment (temporary barriers), or as updated surveys for existing barrier locations⁵. The remaining 425 assessment locations are not barriers to fish passage. Assessment information has been submitted to the CDFW Passage Assessment Database. Figure 2 (page 10) shows locations listed in Table 2.

Figure 2 - 2015 Completed Fish Passage Assessment Locations

Active Fish Passage Remediation Locations

Caltrans is currently developing projects to remediate 37 fish passage barrier locations. Twenty-two new locations have been funded on the State Highway System; eighteen of those locations are high priority locations for both Caltrans and CDFW, and four of the locations have been initiated for identified repair or maintenance needs or as designated mitigation.

Table 3 below, Active Fish Passage Remediation Locations, lists the current remediation locations that are either funded through construction, or partially funded for planning, design and permitting. Figure 3 (page 14), is a map of the locations that are listed in Table 3. The locations that are **bold and underlined** show the 22 new locations.

⁸ District 5 and CDFW staff in the Central and South Coast Region have updated priority locations to reflect recent studies and assessments. Scott Creek (PAD ID# 732371) and Waddell Creek (PAD ID# 731839) are not barriers to anadromous fish. Pennington Creek (PAD ID# 700040) is a barrier but due to updated information it is no longer a top 10 Priority location.

Figure 4 - Priority Fish Passage Locations for Remediation

Appendix A – Fish Passage Locations Completed

Senate Bill 857 (Kuehl, Chapter 589, Statutes of 2005), was enacted into law effective January 1, 2006. Appendix A, Fish Passage Locations Completed, is a list of all fish passage barriers that have been either fully or partially remediated on the State Highway System, since that time. The below table lists all treated barriers from January 1, 2006 to December 31, 2015. **Bold and underlined** locations are new to this report and constructed in 2015. Figure 5 (page 22), is a map of the locations that are listed in Appendix A.

Appendix A – Fish Passage Locations Completed

⁹ **Partial Treatment** – hydraulic treatments intended to improve fish passage, while not fully spanning the natural channel width. This can be accomplished by incorporating weirs, baffles, ladders and any other water velocity or grade control device. These facilities need to be annually inspected and maintained to ensure that sediment deposition and/or scour pools do not impact continued access to upstream habitat.

¹⁰ **Full Treatment** – locations where the natural channel width is fully spanned. Post-project monitoring needs to occur to ensure that sediments in the channel does not impact passage for fish after the first few winter seasons.
