

**Tony Schuur** is the current President of the California Aquaculture Association. He is an aquaculture planning and engineering consultant in private practice providing technical and financial planning services to commercial aquaculture ventures and international finance agencies, and providing expert testimony for legal proceedings involving aquaculture. He has spent the majority of his 40-year career working in foreign countries located in Central and South America, Asia, the Middle East, and Africa. He has also planned and implemented aquaculture facilities in Texas, Florida, and California for production of marine shrimp; several species of fish including sturgeon, catfish, tilapia and trout; and oysters. Two of his most recent assignments involved design and implementation of marine finfish hatchery facilities in La Paz (Totuava) and Ensenada (Striped Bass), Mexico.
