

YOU ARE WORKING TO **ACHIEVE THIS FUTURE**

## **Strategies and Innovations in Financing Local Stormwater and Dry Weather Runoff Improvements**

Nancy L.C. Steele, D.Env. - Executive Director

Joint Senate Hearing, Governance & Finance and Natural Resources & Water – February 25, 2015

# Stormwater Infiltration is Feasible to Augment Groundwater Supplies

- Pollutant concentrations in groundwater did not correspond to stormwater concentrations
- Groundwater quality was stable or improved for most constituents at sites with shallow groundwater
- Bacteria were removed by soil
- VOCs were not detected in groundwater
- Inorganic groundwater constituents showed no or decreasing trends in concentrations in groundwater when compared to polluted stormwater

## Los Angeles Basin Water Augmentation Results, 2000-2008

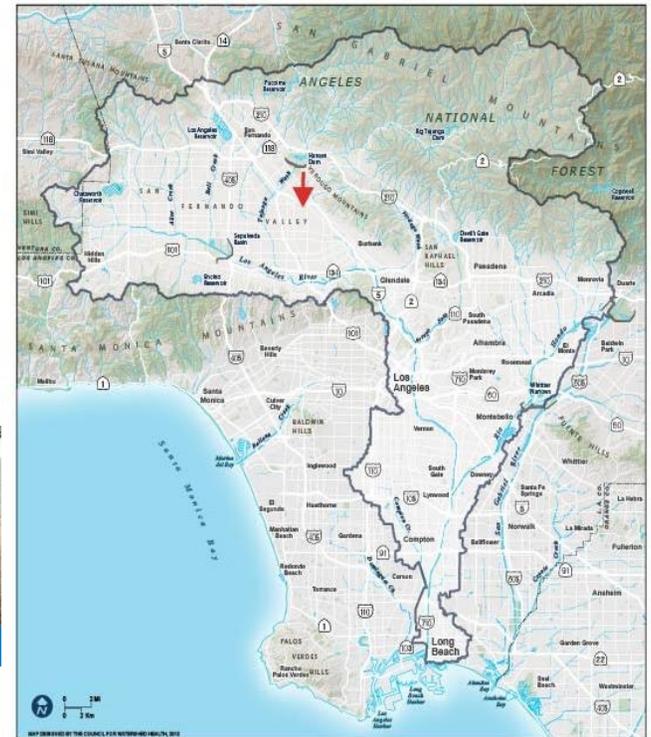

# Elmer Avenue Retrofit Catchment Areas, 2010

40 acres drain to Elmer Avenue

20 acres to Elmer Paseo

# Elmer Avenue as a Recharge Facility

1. PARKWAY BIO-SWALES

2. INFILTRATION GALLERIES

3. CATCH BASINS

# Elmer Avenue Before and After

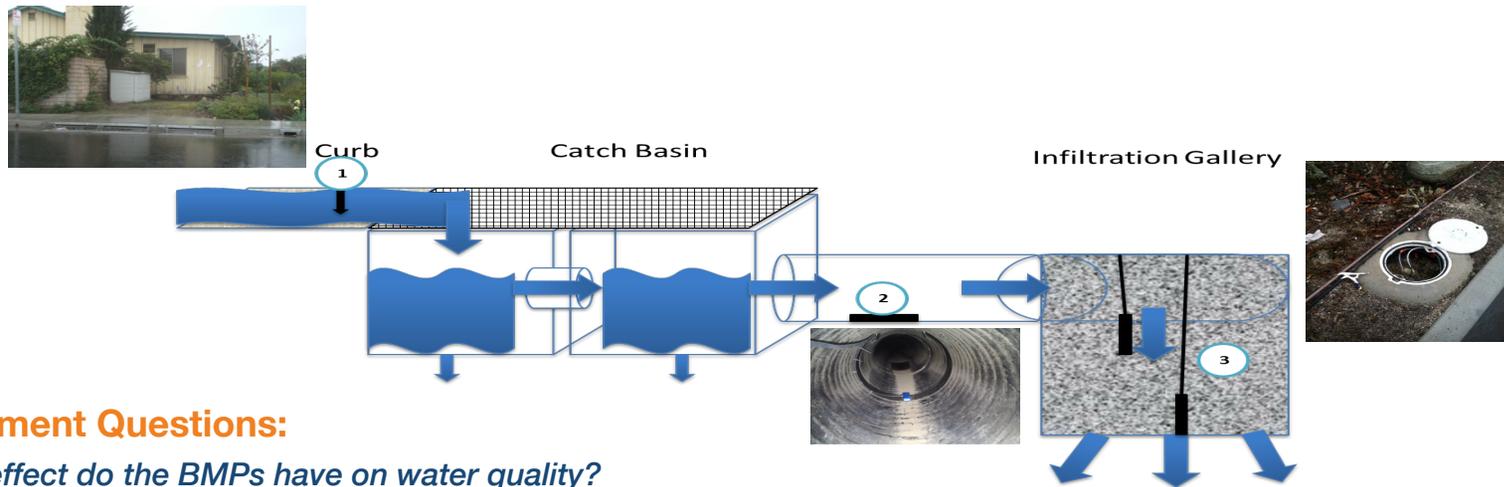

Before (2007)

After (2011)

# Elmer Avenue Performance Monitoring 2010-2014

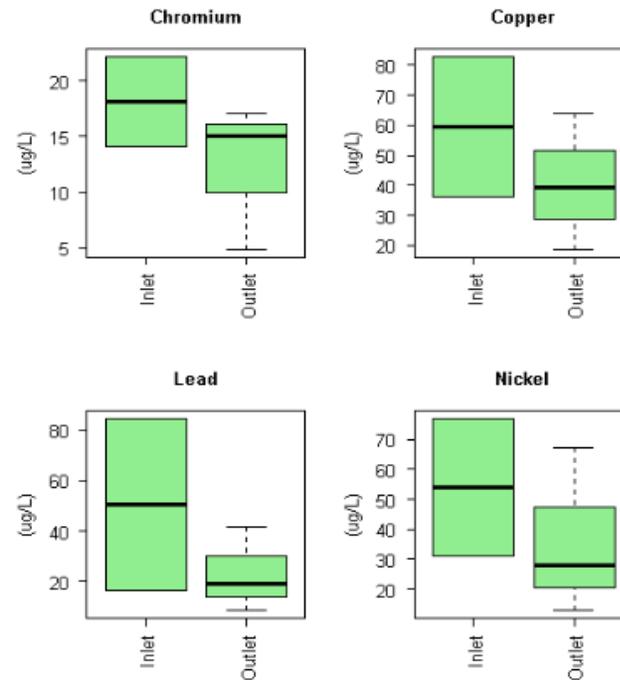

## Management Questions:

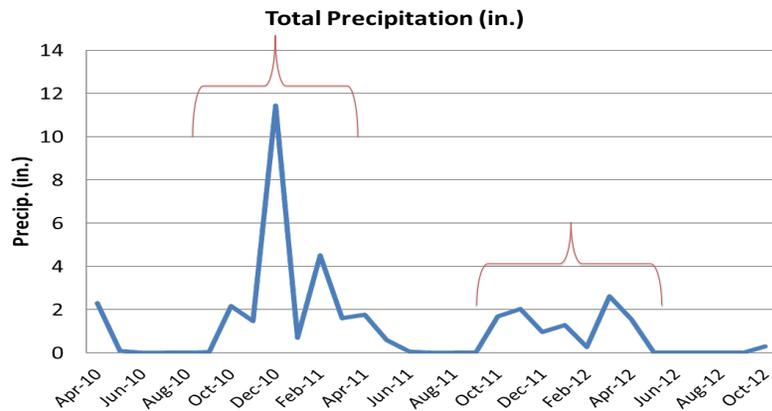

1. *What effect do the BMPs have on water quality?*
2. *What effect do the BMPs have on water supply?*
3. *What are the O&M needs of the BMPs?*
4. *How has the project affected the resident's relationship to watershed health?*
5. *What are the additional benefits of the project?*

# Water Quality: Catch Basins Intercept Particle-bound Pollutants Before They Get to Groundwater

# Water Supply: Catch Basins and Bioswales Capture Water

**21 Acre-feet infiltrated**  
April 2010 – August 2012

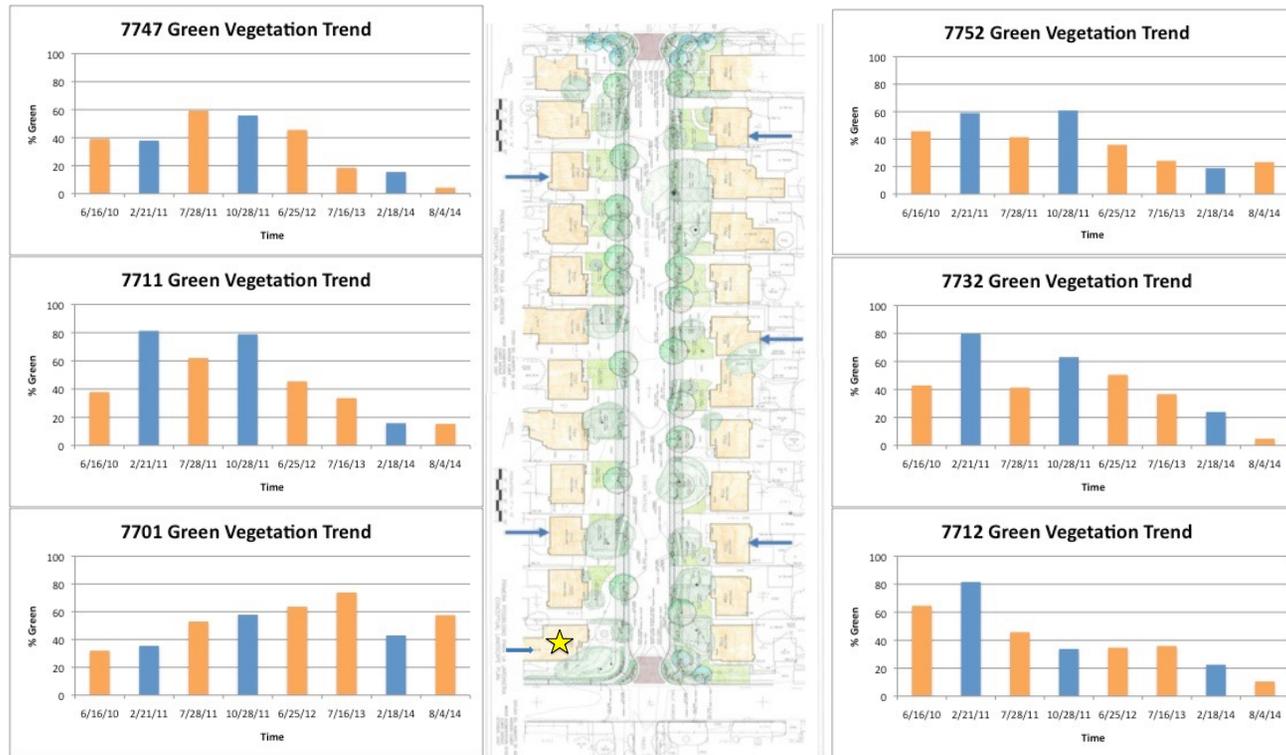

## Quantification challenges:

- *Development of valid methods for bioswales and urban streets*
- *Maintenance of catch basins needs to occur regularly*

# The “Green” in Green Infrastructure: Plants Declined With the Drought

★ But now we know which plants are the hardy survivors

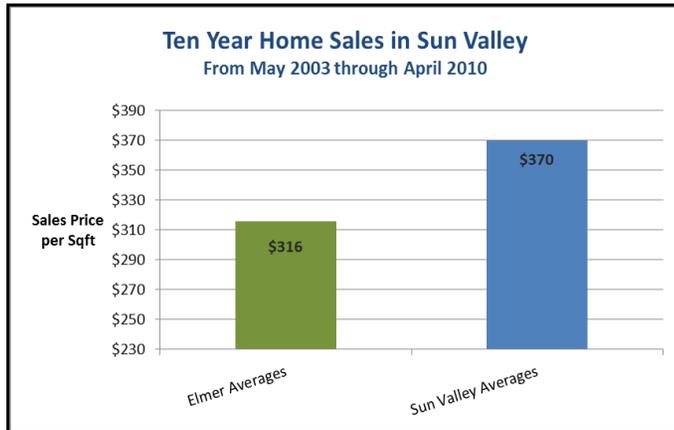

★ This Homeowner Loves to Garden

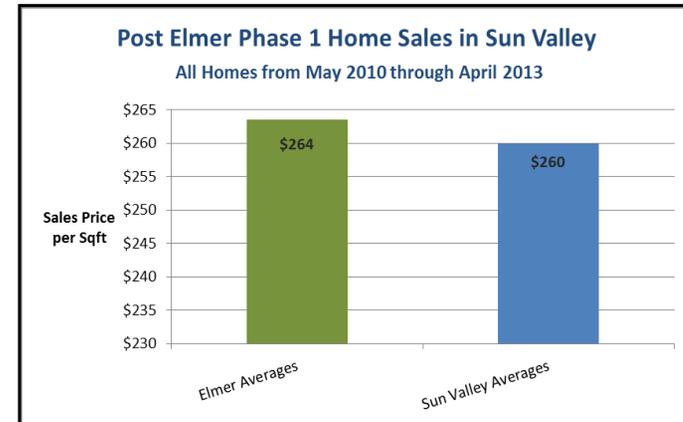

# Additional Benefits: Retrofit Appears to Have Positively Influenced Home Values on Elmer Avenue

Pre-construction

Post-construction

## Monitoring: Informed Elmer Paseo Design and Improvements to the System

### Elmer Paseo:

- Native Vegetation
- Porous Pavement
- Design for more infiltration

### Elmer Avenue:

- Added devices to remove sediment
- Added catch basins
- Regraded street to direct more water to Elmer

# Elmer Paseo Before and After
