California Gas Prices Average 32¢ More Per Gallon

EIA Gas Prices - Source: http://www.eia.gov/dnav/pet/pet_pri_gnd_dcus_sca_w.htm

Californians Spent an Extra \$550 Million in February

The California Difference

2005	3,346,949,554.20
2006	3,798,092,812.56
2007	5,171,870,229.57
2008	4,058,702,090.01
2009	4,887,722,903.91
2010	4,609,356,763.97
2011	4,380,040,128.90
2012	6,092,013,553.08
2013	5,522,518,883.78
2014	5,637,089,519.88

- Over the last 10 years Californians have paid an average of 32¢ more per gallon than the rest of the nation.
- This has amounted to Californians paying \$47.5 Billion extra over the past decade.
- That's over \$13 Million per day!

Total:

\$47,504,356,439.86!

Price Spikes often Precipitated by Major Refinery Problems

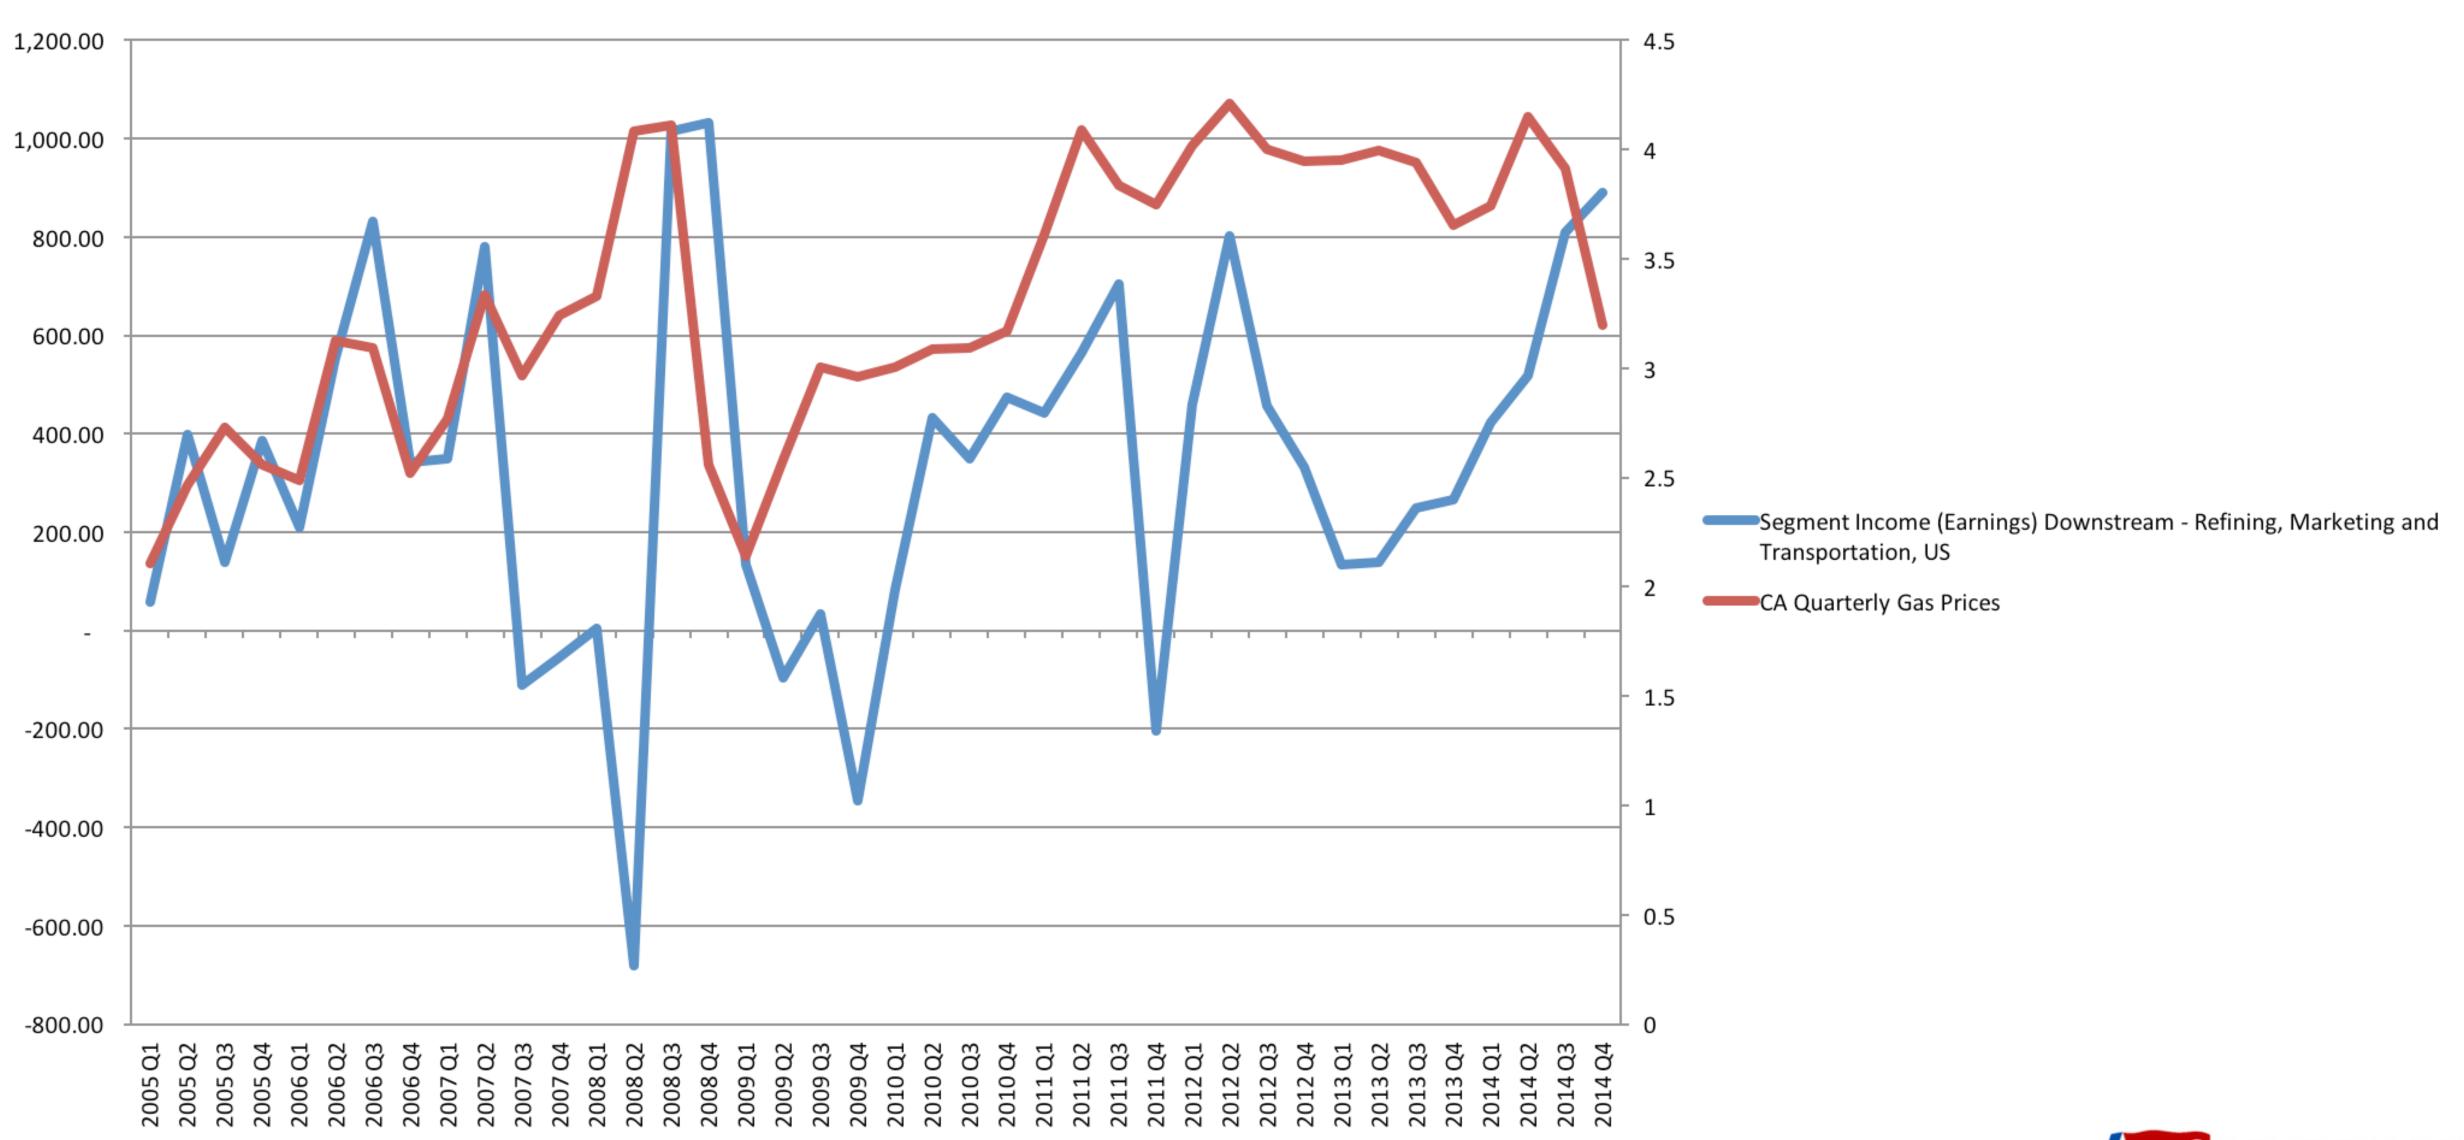

Lack of Transparency

- •Federal gasoline inventory data lags by 3 month no public record of current days of supply for the state is available in real time.
- No agency collects and discloses current and historical information on refinery outages and maintenance schedules, making it impossible to know how much of the state's refining capacity is being utilized at any given time.

1995 Chevron Memo released by Senator Ron Wyden

"If the U.S. petroleum industry doesn't reduce its refining capacity, it will never see any substantial increase in refinery margins (profits)...In the last nine months, gasoline demand has been healthy and inventories remained close to record lows, factors that should normally lead to higher prices. However, refining utilization has been rising, sustaining high levels of operations, thereby keeping prices low."

- Chevron Memo

Conclusion

- •California needs to collect and publicly disclose real time data about refinery operations and days of supply on hand.
- •California should mandate that refiners keep 18 days of supply of gasoline on hand.
